Which customer records genuinely need KYC attention first?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that higher-risk active accounts should lead? Or are we actually seeing that many document gaps belong to inactive or closed accounts? I also do not want us to miss the possibility that company ownership and cross-border activity create distinct needs.

The practical decision is the refresh sequence, exclusion rules and customer-contact approach. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Regards
