The day-end cut-off is producing two versions of the truth

Morning,

I need help with something that sounds simple but probably is not.

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if most breaks are timing differences?
2. What evidence would instead support that retries or reversals are being counted twice?
3. How do we rule out that a specific channel is posting outside the expected cut-off?

We looked at a version of this before. For the November 2019 review, please show what changed and whether the earlier conclusion still holds. Please work towards whether matching rules, cut-off times or source ownership must change. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations. One caution: Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Regards
