The dispute has three timelines and they do not agree

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A customer dispute cannot be assessed from the complaint text alone because authorisation, posting, reversal and contact dates differ. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Could the answer be that the customer saw a temporary posting as final? Or are we actually seeing that the complaint outcome does not match the underlying evidence? I also do not want us to miss the possibility that a bank-side delay caused the loss.

We looked at a version of this before. For the November 2019 review, please show what changed and whether the earlier conclusion still holds. The practical decision is the evidence position and whether remediation should precede correspondence. Please send a model-ready table, data dictionary and an honest baseline; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Use statements only where they exist and do not invent merchant evidence or call recordings.

Regards
