Operational volume is hiding repeat handling

Team,

Before this becomes another standing report, can we answer the real question?

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance. The possible stories are that unclear ownership keeps cases open, that late posting generates downstream work, or that a small set of exception types creates most hand-offs.

We looked at a version of this before. For the February 2020 review, please show what changed and whether the earlier conclusion still holds. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which process should be redesigned and where ownership should sit.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations.

Please state the limitation plainly: There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thanks
