First-contact resolution from the customer's side

Morning,

I need help with something that sounds simple but probably is not.

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

The questions I would ask in the room are:

1. What would we expect to see if the first contact did not resolve the issue?
2. What evidence would instead support that transaction posting changed after the first answer?
3. How do we rule out that channel handover loses context?

We looked at a version of this before. For the March 2020 review, please show what changed and whether the earlier conclusion still holds. Please work towards which journeys need process redesign, clearer wording or ownership. A useful output would be a working Excel file with the exception population and clear columns.

Use customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. One caution: Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Regards
