The closure file needs a defensible chronology

Morning,

I need help with something that sounds simple but probably is not.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

The questions I would ask in the room are:

1. What would we expect to see if the closure was operationally complete?
2. What evidence would instead support that the main risk is poor communication rather than an incorrect decision?
3. How do we rule out that downstream activity continued after the status event?

We looked at a version of this before. For the March 2020 review, please show what changed and whether the earlier conclusion still holds. Please work towards whether the matter can be answered, remediated or requires formal legal review. A useful output would be a Power BI page with drill-through to a reproducible case list.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. One caution: The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Regards
