Please trace the fee and interest exceptions

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that reversals are not inheriting the original reference cleanly? Or are we actually seeing that the issue is statement timing? I also do not want us to miss the possibility that the product configuration and transaction description disagree.

We looked at a version of this before. For the April 2020 review, please show what changed and whether the earlier conclusion still holds. The practical decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please send a short decision pack with no more than five slides and an attached evidence table; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Regards
