KYC completeness and account status need one rule

Team,

Before this becomes another standing report, can we answer the real question?

Regulatory Reporting needs a reproducible population of active, restricted and closed accounts with the relevant customer due-diligence fields. The possible stories are that company and individual rules are being mixed, that snapshot timing explains the difference, or that status changes are not applied consistently.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2020 as the new evidence point rather than recycling the earlier conclusion. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide the agreed population rule, data-quality exceptions and evidence trail.

Data available: monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories.

Please state the limitation plainly: The dataset can test completeness and consistency, not determine whether every document is authentic.

Thanks
