Promise-to-pay cash is not matching cleanly

Hi,

This came up in a working session and nobody had the same definition.

Collections and Finance are using different notions of a successful recovery, especially when payments arrive after the promised date or through another channel.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: late payments are being treated as broken promises; partial cures are being reported as full cures; or a payment reaches the account but not the collections case.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy. We looked at a version of this before. For the July 2020 review, please show what changed and whether the earlier conclusion still holds.

What we need to decide is the definition of cure and the exception queue that Finance and Collections will both use. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data can reconcile customer and case activity, but not the accounting ledger entry.

Thank you
