The first 30 days after a branch opening

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Branch Network wants to separate productive onboarding from accounts that never progress beyond opening and initial deposit. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that some customer types need assisted follow-up? Or are we actually seeing that card or online activation friction delays use? I also do not want us to miss the possibility that first useful activity varies by branch.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2020 as the new evidence point rather than recycling the earlier conclusion. The practical decision is where branch coaching or onboarding process changes are needed. Please send a model-ready table, data dictionary and an honest baseline; I need the exceptions and counter-examples, not only an average.

Work from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Do not rank branches on raw volume without controlling for opening month, customer mix and account type.

Regards
