Find the cases that cross too many teams

Hi,

This came up in a working session and nobody had the same definition.

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: a small set of exception types creates most hand-offs; unclear ownership keeps cases open; or late posting generates downstream work.

The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2020 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which process should be redesigned and where ownership should sit. Please bring a model-ready table, data dictionary and an honest baseline, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thank you
