### Repeat contact is exposing broken ownership

---

Hi,

This came up in a working session and nobody had the same definition.

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: transaction posting changed after the first answer; channel handover loses context; or the first contact did not resolve the issue.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2020 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which journeys need process redesign, clearer wording or ownership. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thank you
