Account closed, but was the customer journey coherent?

Morning,

I need help with something that sounds simple but probably is not.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

The questions I would ask in the room are:

1. What would we expect to see if the closure was operationally complete?
2. What evidence would instead support that the main risk is poor communication rather than an incorrect decision?
3. How do we rule out that downstream activity continued after the status event?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2020 as the new evidence point rather than recycling the earlier conclusion. Please work towards whether the matter can be answered, remediated or requires formal legal review. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. One caution: The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Regards
