Price, value or poor explanation?

Team,

Before this becomes another standing report, can we answer the real question?

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. The possible stories are that high-use customers tolerate fees when service works, that complaints cluster after specific charges, or that fee reversals treat symptoms without fixing the journey.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2020 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide which fee, wording, waiver or product design should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
