Follow-up: we have three definitions of active customer

Hi team,

Analytics is receiving requests that use the same business term for different populations, dates and customer relationships.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Can you test these explanations rather than choosing one at the start?

- an undocumented exclusion is changing the denominator
- snapshot timing creates the difference
- the teams need different metrics

The decision is the governed definition, owner, exclusions and reconciliation bridge. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context. A technically consistent definition still needs business ownership and approval.

Thanks
