Follow-up: what happens after a card is replaced?

Hi team,

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Can you test these explanations rather than choosing one at the start?

- ATM and transaction channels reflect card history differently
- customers resume normal use quickly
- old credentials continue to generate declines

The decision is which reissue controls or customer messages need improvement. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Thanks
