Follow-up: did digital adoption remove friction or move it?

Hi team,

Product needs to define successful channel adoption as sustained useful activity rather than enrolment or one event.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Can you test these explanations rather than choosing one at the start?

- first successful use predicts continued use
- adoption differs by product and customer need
- customers return to assisted channels after failure

The decision is which onboarding journey and success metric should change. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Available data supports channel behaviour but not every app screen, click or abandoned session.

Thanks
