Follow-up: which branches open accounts that customers actually use?

Hi,

This came up in a working session and nobody had the same definition.

Branch Network wants to separate productive onboarding from accounts that never progress beyond opening and initial deposit.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: some customer types need assisted follow-up; first useful activity varies by branch; or card or online activation friction delays use.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is where branch coaching or onboarding process changes are needed. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Do not rank branches on raw volume without controlling for opening month, customer mix and account type.

Thank you
