Follow-up: resolved in the system, but resolved for the customer?

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Complaint status alone may overstate resolution when the same customer returns, the transaction remains unresolved or the account closes. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Could the answer be that resolution notes are generic? Or are we actually seeing that specific categories lead to repeat contact or attrition? I also do not want us to miss the possibility that resolved complaints do not recur.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2021 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which complaint outcomes need quality review and which root causes need fixing. Please send a control view with the exceptions, owner and reason each item was included; I need the exceptions and counter-examples, not only an average.

Work from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories. The analysis can identify recurrence and later behaviour, not customer satisfaction that was never recorded.

Regards
