Follow-up: are distressed customers entering the right pathway?

Hi,

This came up in a working session and nobody had the same definition.

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: bank-side processing issues are entering collections; some customers recover after payday; or repeat failures and complaints indicate deeper stress.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which treatment path, contact tone and escalation should apply. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thank you
