Follow-up: where did the process override its own rule?

Hi,

This came up in a working session and nobody had the same definition.

Audit is testing whether approvals, declines, restrictions and collections outcomes are consistent with recorded policy inputs.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: a channel or period has a materially different decision pattern; missing data looks like an override; or overrides are rare and explainable.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. Different teams have produced different answers from the same period, so population and timing rules need to be visible. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the sample for process-owner walkthroughs and policy evidence. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; monthly account snapshots, status events, limits, product enrolments and signatories; collections cases, promises to pay and recovery payments; monthly customer and KYC snapshots. The files do not contain every approval authority or policy version; flag unexplained differences rather than declaring misconduct.

Thank you
