Follow-up: why do newly opened accounts go quiet?

Team,

Before this becomes another standing report, can we answer the real question?

Product wants to understand why some customers make an initial deposit but fail to establish recurring activity. The possible stories are that the account was opened for a one-off purpose, that activation friction causes early dormancy, or that fees or a failed first journey discourage use.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide which onboarding intervention or product proposition should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data cannot observe the customer's relationship with competing banks.

Thanks
