### Follow-up: fees and interest are not landing where Finance expects

---

Team,

Before this becomes another standing report, can we answer the real question?

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. The possible stories are that the product configuration and transaction description disagree, that reversals are not inheriting the original reference cleanly, or that the issue is statement timing.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2021 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide whether Finance needs a mapping correction, a posting control or a customer remediation list.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not calculate general-ledger balances; no general ledger is present.

Thanks
