Follow-up: the day-end cut-off is producing two versions of the truth

Hi,

This came up in a working session and nobody had the same definition.

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: most breaks are timing differences; retries or reversals are being counted twice; or a specific channel is posting outside the expected cut-off.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is whether matching rules, cut-off times or source ownership must change. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations. Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Thank you
