Follow-up: which customer records genuinely need KYC attention first?

Hi team,

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2021 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- many document gaps belong to inactive or closed accounts
- company ownership and cross-border activity create distinct needs
- higher-risk active accounts should lead

The decision is the refresh sequence, exclusion rules and customer-contact approach. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Thanks
