Follow-up: audit wants the lineage, not another dashboard

Hi,

This came up in a working session and nobody had the same definition.

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: manual exclusions are changing the answer; the number can be reperformed from source; or different teams use the same label for different populations.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2021 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which data controls must be formalised before the next assurance review. Please bring a Power BI page with drill-through to a reproducible case list, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Thank you
