Follow-up: which timestamp should the analysis trust?

Team,

Before this becomes another standing report, can we answer the real question?

A requested analysis changes depending on whether the team starts from transaction, debit-order, account-status or customer-contact records. The possible stories are that the sources record different stages of one event, that one source is updated retrospectively, or that matching logic is joining unrelated records.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2021 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. Different teams have produced different answers from the same period, so population and timing rules need to be visible.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide the source precedence rule and the cases that must remain explicitly unresolved.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not force agreement by dropping exceptions; preserve contradictory evidence for owner review.

Thanks
