Follow-up: channel adoption after first successful use

Morning,

I need help with something that sounds simple but probably is not.

Product needs to define successful channel adoption as sustained useful activity rather than enrolment or one event. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

The questions I would ask in the room are:

1. What would we expect to see if adoption differs by product and customer need?
2. What evidence would instead support that first successful use predicts continued use?
3. How do we rule out that customers return to assisted channels after failure?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2021 as the new evidence point rather than recycling the earlier conclusion. Please work towards which onboarding journey and success metric should change. A useful output would be a one-page finding note plus the underlying CSV for our own review.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. One caution: Available data supports channel behaviour but not every app screen, click or abandoned session.

Regards
