Follow-up: fee outcomes after failed payments

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Could the answer be that similar cases receive different remedies? Or are we actually seeing that fees follow customer-caused failure? I also do not want us to miss the possibility that bank-side delay creates avoidable charges.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2022 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether a control, remediation population or policy clarification is required. Please send a Power BI page with drill-through to a reproducible case list; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Regards
