Relevance, eligibility and bad timing

Hi,

This came up in a working session and nobody had the same definition.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: campaign eligibility differs from likely conversion; recent behaviour identifies a useful product need; or service recovery should precede selling.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the decision rules and evaluation design for a controlled campaign. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Thank you
