Follow-up: first-contact resolution from the customer's side

Morning,

I need help with something that sounds simple but probably is not.

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

The questions I would ask in the room are:

1. What would we expect to see if channel handover loses context?
2. What evidence would instead support that the first contact did not resolve the issue?
3. How do we rule out that transaction posting changed after the first answer?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2022 as the new evidence point rather than recycling the earlier conclusion. Please work towards which journeys need process redesign, clearer wording or ownership. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. One caution: Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Regards
