Follow-up: primary-bank behaviour, not account-open counts

Morning,

I need help with something that sounds simple but probably is not.

The board keeps using active accounts as a proxy for customer primacy, and that assumption needs to be challenged. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

The questions I would ask in the room are:

1. What would we expect to see if regular inflows and recurring payments indicate a primary relationship?
2. What evidence would instead support that fee or service friction precedes the drop in activity?
3. How do we rule out that customers keep the account open but move useful activity elsewhere?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2022 as the new evidence point rather than recycling the earlier conclusion. Please work towards how Keystone should define a primary customer and which customers need service recovery rather than marketing. A useful output would be a working Excel file with the exception population and clear columns.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. One caution: Use transaction behaviour as a proxy. Do not claim to observe activity held at another bank.

Regards
