Follow-up: ATM failure is becoming branch workload

Hi team,

ATM failures and blocked-card issues can shift customers toward branches, especially during infrastructure disruption.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?

- specific provinces show repeat access failure
- customers switch to smaller withdrawals or branch contact
- cash-bin or host issues dominate

The decision is where contingency communication and ATM support should be prioritised. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; monthly customer and KYC snapshots. The data does not contain branch cash holdings or queue time.

Thanks
