Follow-up: please trace the fee and interest exceptions

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Could the answer be that the issue is statement timing? Or are we actually seeing that the product configuration and transaction description disagree? I also do not want us to miss the possibility that reversals are not inheriting the original reference cleanly.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2022 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please send a short decision pack with no more than five slides and an attached evidence table; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Regards
