Follow-up: KYC refresh should be risk-based, not a blanket campaign

Team,

Before this becomes another standing report, can we answer the real question?

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. The possible stories are that company ownership and cross-border activity create distinct needs, that higher-risk active accounts should lead, or that many document gaps belong to inactive or closed accounts.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide the refresh sequence, exclusion rules and customer-contact approach.

Data available: monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context.

Please state the limitation plainly: Completeness fields do not prove document validity or current legal sufficiency.

Thanks
