Follow-up: the fee question is about behaviour after the charge

Hi team,

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?

- fee reversals treat symptoms without fixing the journey
- complaints cluster after specific charges
- high-use customers tolerate fees when service works

The decision is which fee, wording, waiver or product design should be tested. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
