Follow-up: the participation file needs an operational responsibility map

Hi,

This came up in a working session and nobody had the same definition.

A loan participation question has exposed confusion about which bank originated, serviced and carried each risk share.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: customer-facing activity is being attributed to the wrong institution; the records clearly support the operating model; or servicing actions do not align with the stated role.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which cases require document review and which are data-quality corrections. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is loan participation and servicing records available by the request date; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; debit-order mandates, collection dates, suspensions and cancellations; collections cases, promises to pay and recovery payments. The dataset records roles and activity but is not the signed legal agreement.

Thank you
