Follow-up: customer statement, system record and contact notes need one chronology

Hi team,

A customer dispute cannot be assessed from the complaint text alone because authorisation, posting, reversal and contact dates differ.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2022 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- the complaint outcome does not match the underlying evidence
- the customer saw a temporary posting as final
- a bank-side delay caused the loss

The decision is the evidence position and whether remediation should precede correspondence. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Use statements only where they exist and do not invent merchant evidence or call recordings.

Thanks
