Follow-up: what should the bank not offer this customer right now?

Hi,

This came up in a working session and nobody had the same definition.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: campaign eligibility differs from likely conversion; service recovery should precede selling; or recent behaviour identifies a useful product need.

The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the decision rules and evaluation design for a controlled campaign. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Thank you
