Follow-up: first login is not adoption

Hi,

This came up in a working session and nobody had the same definition.

Product needs to define successful channel adoption as sustained useful activity rather than enrolment or one event.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: first successful use predicts continued use; adoption differs by product and customer need; or customers return to assisted channels after failure.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2022 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which onboarding journey and success metric should change. Please bring a one-page finding note plus the underlying CSV for our own review, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency. Available data supports channel behaviour but not every app screen, click or abandoned session.

Thank you
