Follow-up: account closed, but was the customer journey coherent?

Morning,

I need help with something that sounds simple but probably is not.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

The questions I would ask in the room are:

1. What would we expect to see if the closure was operationally complete?
2. What evidence would instead support that downstream activity continued after the status event?
3. How do we rule out that the main risk is poor communication rather than an incorrect decision?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2022 as the new evidence point rather than recycling the earlier conclusion. Please work towards whether the matter can be answered, remediated or requires formal legal review. A useful output would be a Power BI page with drill-through to a reproducible case list.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. One caution: The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Regards
