Follow-up: the account is open; the relationship never started

Team,

Before this becomes another standing report, can we answer the real question?

Product wants to understand why some customers make an initial deposit but fail to establish recurring activity. The possible stories are that fees or a failed first journey discourage use, that the account was opened for a one-off purpose, or that activation friction causes early dormancy.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2022 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which onboarding intervention or product proposition should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data cannot observe the customer's relationship with competing banks.

Thanks
