Follow-up: the customer statement and transaction view disagree

Hi team,

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2022 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Can you test these explanations rather than choosing one at the start?

- the issue is statement timing
- the product configuration and transaction description disagree
- reversals are not inheriting the original reference cleanly

The decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Thanks
