Which fields belong in the shared analytical view? - 2023 control review

Hi team,

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2023 as the new evidence point rather than recycling the earlier conclusion. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Can you test these explanations rather than choosing one at the start?

- most use cases need derived or masked fields
- different projects require different retention and access
- restricted identifiers are being copied for convenience

The decision is the shared schema, restricted extension and audit trail. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thanks
