Follow-up: next best action starts with next best silence

Morning,

I need help with something that sounds simple but probably is not.

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

The questions I would ask in the room are:

1. What would we expect to see if campaign eligibility differs from likely conversion?
2. What evidence would instead support that service recovery should precede selling?
3. How do we rule out that recent behaviour identifies a useful product need?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2023 as the new evidence point rather than recycling the earlier conclusion. Please work towards the decision rules and evaluation design for a controlled campaign. A useful output would be a working Excel file with the exception population and clear columns.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. One caution: Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Regards
