Why do late postings keep changing yesterday's answer? - 2023 control review

Morning,

I need help with something that sounds simple but probably is not.

Finance and Operations are reconciling the same activity to different days because authorisation, posting and statement dates do not always line up. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

The questions I would ask in the room are:

1. What would we expect to see if a specific channel is posting outside the expected cut-off?
2. What evidence would instead support that most breaks are timing differences?
3. How do we rule out that retries or reversals are being counted twice?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2023 as the new evidence point rather than recycling the earlier conclusion. Please work towards whether matching rules, cut-off times or source ownership must change. A useful output would be a working Excel file with the exception population and clear columns.

Use transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; available customer bank statements. One caution: Statements are only available for selected accounts and months; use them as evidence samples, not as the population denominator.

Regards
