Which fields mean as-at, and which mean what we know now? - 2023 control review

Hi team,

Repeated monthly parquet snapshots contain fields that may be updated retrospectively, creating risk for trend analysis and models.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2023 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- CDC fragments and snapshots are being combined incorrectly
- closure or status fields are backfilled
- records preserve true as-at state

The decision is which fields need event tables, effective dating or restricted use. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. Do not assume a file path date is the effective date of every field.

Thanks
