What happens after a card is replaced? - 2023 control review

Team,

Before this becomes another standing report, can we answer the real question?

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue. The possible stories are that ATM and transaction channels reflect card history differently, that old credentials continue to generate declines, or that customers resume normal use quickly.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2023 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which reissue controls or customer messages need improvement.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Thanks
