Which exceptions create the most manual work? - 2023 control review

Team,

Before this becomes another standing report, can we answer the real question?

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance. The possible stories are that late posting generates downstream work, that a small set of exception types creates most hand-offs, or that unclear ownership keeps cases open.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2023 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Please prepare a one-page finding note plus the underlying CSV for our own review. The output must help us decide which process should be redesigned and where ownership should sit.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations.

Please state the limitation plainly: There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thanks
