### Why did the customer have to ask twice? - 2023 control review

---

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Could the answer be that channel handover loses context? Or are we actually seeing that the first contact did not resolve the issue? I also do not want us to miss the possibility that transaction posting changed after the first answer.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2023 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which journeys need process redesign, clearer wording or ownership. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Regards
